HSM Shredder Baler Combinations

Product Overview

HSM®

We generally ensure one thing: quality right down to the last detail.

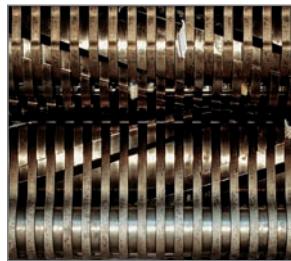

Reliable: the functioning

- Material intake via practical loading table and conveyor belt
- Optimised transfer technology prevents the material from passing the cutting device without being shredded
- Closed, dust-free material transfer from the document shredder directly into the downstream baling press
- Easy and quick handling by means of automatic control
- Shredding and pressing conducted simultaneously

Intelligent: the control

- Integrated controller for both document shredder and baling press
- Document shredder with keypad for continuous operation and reverse as well as automatic reverse in the event of a paper jam
- Modern controller with multi-language display and convenient menu guidance
- Automatic control of the compression process
- Display to indicate „bale ready“

Sturdy: the technology

- Extremely sturdy cutting device with specially hardened, solid steel cutting rollers
- Insensitive to smaller metal parts
- Also shreds chip cards, CDs, disks and other similar material
- Cutting device driven by powerful motor
- Sturdy gear motor with chain drive for maximum throughput capacity
- Torsion-resistant press ram guidance prevents overcharging

Efficient: the result

- Highly compacted shredder material in boxes / plastic bags or as bale
- Highest throughput capacities at low power consumption
- Mobile due to castors

Special features:

- Integrated, manual oiler for cutting unit for all particle cut versions
- Extension of loading table to the right or left available upon request for SP 4040 V model

Combination has great advantages. Together with all detail solutions, each user gets the maximum benefits. Durability, economic efficiency, operator-friendly, high pressing power and highest throughput capacities – these are the typical plus points that each HSM shredder baler combination can be credited for.

HSM SP 4040 V / HSM SP 4940 V

HSM SP 4040 V

A neat machine all round

The HSM SP 4040 V is the starter model in the shredder baler combination sector and the top model in terms of efficiency and space-saving set-up surface!

- Especially compact and space-saving vertical design
- Also shreds computer lists, stacks of documents or daily waste from numerous waste-paper baskets
- Extension of loading table to the right or left upon request

Cutting capacity: up to 130 sheets per cycle

Pressing power: 44 kN

Hourly output: up to 8 bales / boxes à 25 - 35 kg

HSM SP 4940 V

High output in a compact space

With even more power than the HSM SP 4040 V, the HSM SP 4940 V has an impressive cutting capacity per cycle.

- Optimum efficiency with HSM technology
- Complete disposal unit with minimum space requirements
- Specially for continuous operation in large departments and archives

Cutting capacity: up to 320 sheets per cycle

Pressing power: 44 kN

Hourly output: up to 10 bales / boxes à 25 - 35 kg

- Automatic control of the pressing process by means of border light sensors
- Compression of the shredder material directly in boxes or plastic bags
- No strapping necessary for easy and time-saving handling
- Easy removal from boxes or bags with removal trolley
- Standard equipment: 5 boxes, 5 plastic bags, bag holder, 1 removal trolley

HSM SP 4980 / HSM SP 5080

HSM SP 4980

The compact semi-automatic model

In terms of economic efficiency the HSM SP 4980 is very difficult to beat. It combines power and convenient operation in one compact power-pack like no other device.

- Compact, space-saving design
- Efficient document disposal unit for professional use
- Specially for continuous operation in large departments and archives

Cutting capacity: up to 440 sheets per cycle

Pressing power: 80 kN

Hourly output: up to 9 bales à 60 - 80 kg

HSM SP 5080

The inexpensive alternative in the premium class

The HSM SP 5080 is a compact, high performance unit. It produces very dense bales, cleanly packaged in a plastic bag, ready for transport.

- Folders and their contents, bound computer lists or stacks of paper as thick as telephone directories are processed with ease
- The size of the bales allows two bales to fit on a Euro pallet
- Ideal as central document shredding point

Cutting capacity: up to 650 sheets per cycle

Pressing power: 80 kN

Hourly output: up to 10 bales à 60 - 80 kg

- Automatic photoelectric control of the pressing process
- Shredder material compressed directly in the collecting bag
- No strapping necessary for easy and time-saving handling
- Service flap above the conveyor belt for service and cleaning work
- User-friendly hydraulic counterplate
- Standard equipment: 5 plastic bags

HSM SP 4988 / HSM SP 5088

HSM SP 4988

The semi-automatic professional solution

The HSM SP 4988 is the disposal unit which offers excellent price-/performance ratio. The powerful shredder and semi-automatic press with strapping form a highly effective team.

- Low-noise, energy-saving technology
- Efficient material shearing system for protruding material at the press ram
- Dust scrapers on the inside of the conveyor belt increase both service life and reliability

Cutting capacity: up to 440 sheets per cycle

Pressing power: 85 kN

Hourly output: up to 7 bales à 70 - 95 kg

HSM SP 5088

Well-equipped for the long run

With its powerful 9.2 kW motor, the HSM SP 5088 combines high power with the advantages of a channel baling press.

- Optimal loading for maximum throughput capacities in continuous operation
- Bulky cardboard packaging and other material which does not have to be shredded can be filled in directly via the large loading aperture
- Top model as central disposal system for administration offices, banks and authorities etc.

Cutting capacity: up to 650 sheets per cycle

Pressing power: 85 kN

Hourly output: up to 9 bales à 70 - 95 kg

- Channel baling press with loading aperture / inspection flap for direct compression of cardboard or packaging material etc.
- Automatic press channel adjustment for constant pressing power
- Variable bale length setting
- Manual, 3-fold strapping with continuous polyester tape
- Equipped as standard with polythene bag attachment, basic equipment: 5 plastic bags

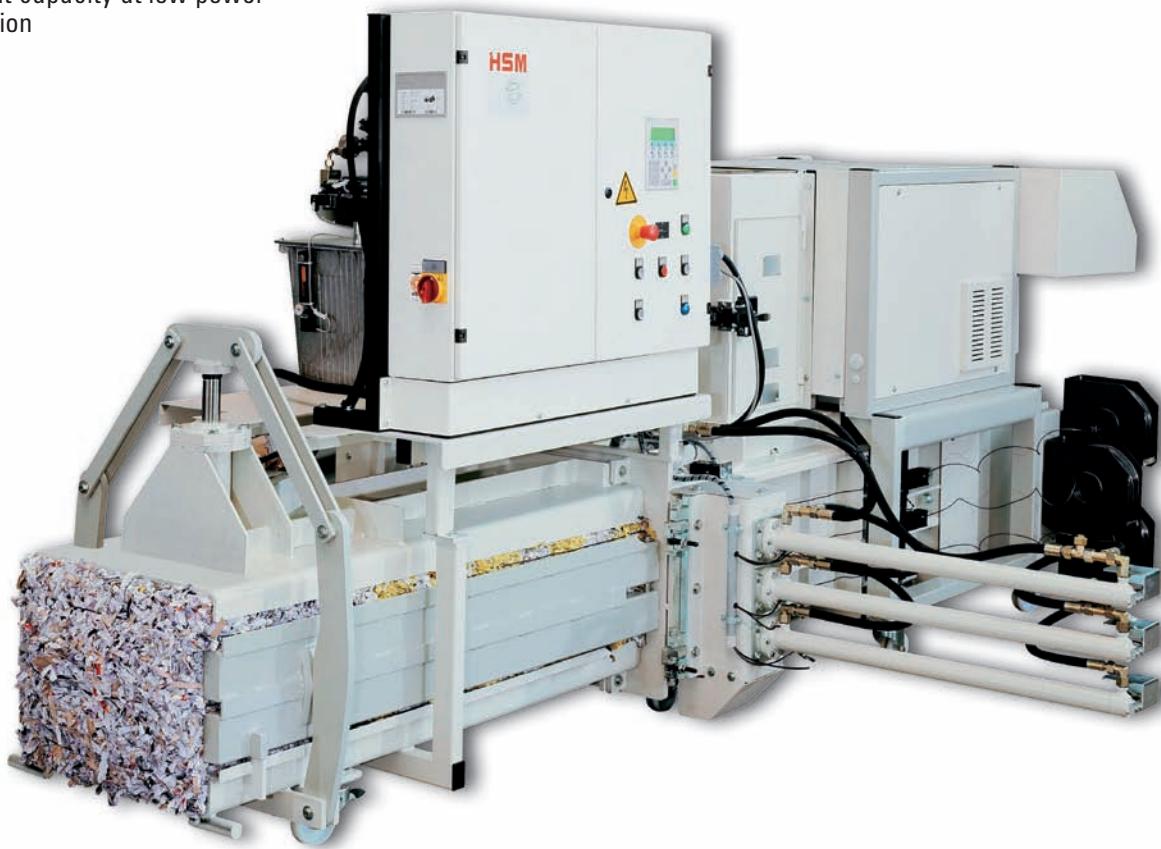

HSM SP 50100

HSM SP 50100

The top model for highest demands

The powerful shredder, which is combined with a fully-automatic baler, ensures maximum throughput capacities. The HSM SP 50100 is the model for highest demands in continuous operation.

- Material infeed optionally via inclined conveyor belt and pre-shredder
- Retaining claws in the press channel and automatic return stroke for perfect bale results
- Professional disposal system for the waste disposal industry with maximum throughput capacity at low power consumption

Cutting capacity: up to 650 sheets per cycle

Pressing power: 110 kN

Hourly output: up to 12 bales à 60 - 120 kg

- Baler with loading aperture / inspection flap for direct compression of cardboard or packaging material etc.
- Efficient material shearing system for protruding material at the press ram
- Automatic press channel adjustment for constant pressing power
- Variable bale length setting
- Fully-automatic 3-fold strapping with patented coiled wire
- Equipped as standard with polythene bag attachment, basic equipment: 5 plastic bags

Explanations of technical data:

- Cutting type** The strips or particles resulting from shredding the material.
- Cutting size** Dimension of the strips or particles of the shredded material (depending on the paper quality).
- Security levels** In accordance with DIN 32757-1.
- Cutting capacity*** The max. number of sheets (DIN A 4, 70g/m² or 80 g/m²), fed lengthwise, with cold motor and lubricated cutting unit, which can be cut in one cycle.
- Throughput capacity** Max. volume that can be theoretically shredded in one hour.
- Cutting speed** This is calculated on the basis of the external diameter and speed of the cutting rollers in idle operation.
- Working width** Maximum effective width of the feed opening.
- Motor** Power consumption of the document shredder motor at maximum cutting capacity* (see above)
- Voltage / frequency** Power consumption of the baler motor in normal operation.
- Pressing power** Three-phase/alternating current power supply.
- Bale size** Piston cylinder surface multiplied by the maximum hydraulic pressure (theoretical value).
- Bale weight** The length/height of the bales varies according to the expansion force of the compressed material.
- Hourly output** The hourly output depends on the type and quantity of the material to be pressed and on the number of persons loading the machine.
- Dimensions of the machine** External dimensions of the machine when ready for operation.
- Machine weight** Net weight of machine without packaging, loaded material or options.

All technical data and dimensions are approximate values. Technical and design modifications reserved.
